

Comeau Aerospace Inc. - Advanced Projects
The Ultimate Flying Machine Design Engineering Projects

CAI-830 Panacea – the new world engine

Intro: This new world engine is nothing like the terraforming and atmospheric modification that was introduced in the recent Superman movie...

- ancient, conventional and advanced technology deployment
- dedicated to protect and preserve life and bio-diversity
- expeditionary craft to fix problems in the atmosphere, water and land
- pilot, crew and specialized personnel and remote deployed options
- can be combined and deployed with trucks, 4 wheelers and other vehicles...

- Integrate and deploy the worlds best most effective detox, decontamination technology
- Agnahotra : an ancient practice from India to clean toxic air and soil conditions, amazing eh!
- Acoustic technology for atmosphere, environment and water revitalization
- experimental and applied metaphysics
- counter-measure for detrimental atmospheric phenomena and weather control

- distillation and water treatment, less toxic metal, chemicals and other bio-hazards
- electromagnetic, geo-magnetic, bio-dynamic applications, light and sound
- ozone generation technology for anti-virus ozone therapy, CO2 generators
- life respecting energy field engineering applications and pro-active bio-field generation
- geo-physical properties assessment and enhancements

- Remineralization technology and applications – ground up rock dust
- acid alkaline/ph balancing – neutral and alkaline is life supporting
- augment and amplify farms: composting, soil regeneration, living soil, rotor-tilling, plowing...
- stockpile and deploy revitalized worm terra-workers – stop killing worms

- eliminate and neutralize genocide bio-hazards :
 - pesticide, herbicide, biocide, insecticide, organophosphates, glyphosates, atrazine, etc.
 - genetically modified organisms – gmo, bio-weapons, endocrine disruptors, phtalates, etc.
 - reduce, neutralize and eliminate chem trails, atmospheric pollution and geo-engineering.

- deploy digestive enzymes and life respecting technology to eliminate or transform pollution.
- reduce marine and water pollution of plastic, toxic chemicals, drugs and other bio-hazards.
- remediate garbage, plastic and other 'brown lands' including EMF, RF production waste.
- creative individuals have invented awesome technology that can make things right.

- elimination or at least mass reduction of microwave technology, towers, wifi, smart meters, portable microwave weapons (cell phones) [there are much better life respecting options]
- cloud busters and negative orgone energy reduction technology – you need to know...
- a microwave blackhole vortex generator transducer rectifier is under development (mVzero)
- save the bees, in fact all life forms, microwave technology is a genocide war machine!

Of course we could always have volcanoes go off, spew ash everywhere and do a clay detox and beauty treatment, and top it off with an ice age...that will fix most things, but would be more of an overkill. All we really need to do is stop the genocide maniac globalism liberalism mind virus and go back to basics. Since this planet is so beautiful, bio-diversity is essential, we each can make a difference...which is why it is important to have nation state sovereignty and self-government, so we all can really be in "our zone", the zone of the creative individual.

The CAI-830 Panacea: voluptuous curves, beautiful aerodynamics, pro-life energy projection
